IT IS CLAIMED:

- A device for storing and/or treating chemicals, comprising
- a casing which is made of glass and is provided with a receiving cavity for storing chemicals therein, and further comprising a transponder including a memory, the transponder being arranged in the device such that it cannot be affected by the chemicals.
- A device according to claim 1, characterized in that the transponder is melted-in in a closed glass housing which constitutes an inseparable part of the device.
 - 3. A device according to claim 1 characterized in that the transponder comprises an antenna.
- 4. A device according to claim 3, characterized in that the antenna is provided on the glass casing by a vapor deposition technique.
- A device according to claim 4,
 characterized in that the vapor-deposited antenna is designed as a layer of metal ions vapor-deposited in a spiral path.
- A device according to claim 3,
 characterized in that the antenna is designed as a coil-shaped element accommodated in the glass housing.
- A device according to claim 1,
 characterized in that it is a sampling tube, the casing being designed as a tube with two open ends,

the receiving cavity accommodating an absorption material, and the transponder being embedded in the absorption material.

- 8. A device according to claim 1, characterized in that it is a sampling bottle or vial for receiving therein chemicals such as samples of blood, water and the like.
- 9. A device according to claim 1, characterized in that it is an HPLC column (high performance liquid chromatography column), the HPLC column comprising a glass casing which is at least partly filled with separation material and comprises two coupling elements at the ends.
 - 10. A device according to claim 9, characterized in that the transponder in the glass housing is embedded in the separation material.
 - 11. A device according to claim 1, characterized in that it is a test tube or blood tube.
- 25 12. A device according to claim 1, characterized in that it is a Petri dish.
- 13. A device according to claim 1,characterized in that the memory of the transponder30 is programmable.
 - 14. A device according to claim 13, characterized in that the memory of the transponder contains a non-erasable identification number.
